

## **REPLACEMENT SHEET**

### **United States Patent Application**

### **Multi Mount Picture Frame**

#### **Abstract**

A picture frame that illustrates photographic film in various positions and displays universal qualities, ranging from mobile vehicles to stationary objects. The picture frame is constructed of a light weight / transparent composite that is affixed to a flexible wand by a ball and socket coupling, and a ratcheting component so picture can be easily adjusted for any application. The picture assembly is mounted to flat, clean surface with a suction cup or any associated mounting device. This will allow the picture frame to be displayed in a convenient and fashionable application.
